(54) IMAGE PICKUP DEVICE AND EDIT DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To simplify the edit job more than that of a conventional device by recording information relating to an image pickup result and image pickup device to specify a recording medium onto the recording medium.

SOLUTION: A timer 9 generates sequentially data D1 of image pickup date and time and provides the data to an additional information generating circuit 8. A counter 10 outputs a count D2 to the additional information generating circuit 8. Furthermore, the user operates an entry means 11 to enter data D3 of a name of a cameraman and an image pickup place. A memory 12 stores the entered text data D3 and data D4 representing a form and a serial number of the text data D3 is outputted to the additional information generating circuit 8. The additional information generating circuit 8 combines the data D1-D4 to generate information relating to the image pickup to specify the recording medium and records the information onto a magnetic tape via a modulation circuit 5.
